

# Quiz

**Our most important requirements**

## Goal

- Define our **common high-level requirements** that we wish to collaborate on.

# How?

- Each institute gets 10 cards to fill in the most important high-level requirements for a *generic, standard and flexible information system to manage the workflow from the scientific proposal to the publication*
- Discuss the requirements
- Only one requirement per card!
- Note only the most important requirements!
- Descriptions should be very rough and high-level:
  - *Proposal submission including free experiment description*
  - *Electronic scheduling of experiments on beamlines*
  - *Instant ordering of coffee and ice cream for review meetings*
- Define for each requirement if you wish to collaborate
- Put the cards in the mail box latest after dinner in the restaurant.

## And then...?

- We group them into themes of same requirements
- The outcome will be presented tomorrow
- Hopefully we will see that most of us have the same needs and wish to collaborate on them ... but be ready for surprises
- We will then discuss the most important requirements and how we could collaborate

Questions?
